

User's View

	<ul style="list-style-type: none"> • This is the start – form • Pay attention to logo, default – name and message-line.
	<ul style="list-style-type: none"> • Login failed
	<ul style="list-style-type: none"> • Login ok (look at message line)
	<ul style="list-style-type: none"> • Button Oeamtc starts homepage of this automobile club • Developer hint: <code>encodeRedirectURL("http://www.oeamtc.at")</code>
	<ul style="list-style-type: none"> • Button “Buy” lists all available cars • That is all cars without an owner • Textfield “customer” is read only • Customer selects these cars he wants to buy and presses “Buy”

	<ul style="list-style-type: none">• Selected cars disappear (now they have an owner)• And message line displays an appropriate message
	<ul style="list-style-type: none">• Button “Bought” displays a list of bought cars of current customer• Textfield “customer” is read only

Hints

- o use netbeans & glassfish
- o ddl.sql, logo ... table definitions and logo
- o MVC in its purest form
- o to deliver: complete project folder
